

r-MicronGlass

Superior cleaning results

Superior cleaning results due to advanced micronfibre technology

r-MicronGlass is Vileda Professional's recycled durable cleaning wipe. Made from 70% recycled post-consumer plastics – like PET-bottles – it is part of Vileda Professional's ambition to minimize your stakeholder's footprint by reducing waste and CO2 emissions throughout the cleaning process. Along with our ambition, we accept no compromises on the cleaning performance and hygiene. Due to advanced micronfibre performance, r-MicronGlass delivers an excellent streak free cleaning result. Its ability to remove up to 99.99% of bacteria and viruses makes the recycled wipe especially suitable for hygiene sensitive areas like hospitals, patient rooms or canteens.

The large surface area of the wipe allows rapid and more effective cleaning than regular sized wipes. Every surface such as stainless steel, plastic or ceramic can be cleaned in only one wipe, without leaving any unpleasant streaks. This multi-use wipe is specifically designed for daily laundering and can be reused multiple times. The superior washing resistance allows daily use with lint-free cleaning results.

The r-process by Vileda Professional: Leading with less

Along with r-MicronQuick, r-MicronGlass is Vileda Professional's new, recycled durable wipe. Labelled with our "Love it clean" logo, it represents our belief that every product we develop must contribute to a sustainable future. Therefore, we have created the r-process – our responsibility to continuously make use of recycled resources, without any compromises on the cleaning results. Our recycled products are up to 100% made from post-consumer plastics. The plastics are shredded into small flakes which are then processed into fibres. With this process, we are following our ambition of creating a healthier planet.
